Cosentino City Mallorca opens to the public at the central Calle Aragón 8, with the aim of becoming a **benchmark in the world of architecture and design** in Palma and the Balearic Islands. This new Cosentino City is the third to be opened in Spain and the seventeenth internationally, in line with the company's firm commitment to continue increasing its network of 'Cities' around the world. With these showrooms, located in the heart of major cities, Cosentino demonstrates that innovation and inspiration go beyond the development of new and groundbreaking materials for the industry; Cosentino City is synonymous with innovating and inspiring in new forms of communication and relationships with customers and partners.

Under the **2.0 concept**, **Cosentino City Mallorca** combines **cutting-edge technology with exquisite design, where material and light are key**. Its nearly 500m², distributed over two floors, are full of pure lines, a balanced and realistic design, and large and bright areas that make visible the purpose of Cosentino, **'to inspire people through innovative and sustainable spaces'**, with the product as the main focus.

From the reception to the Atelier, the tour features attractive and multifunctional spaces where visitors can enjoy a complete experience and understand the full potential of the innovative brands **Silestone®**, **Dekton®**, **Sensa by Cosentino®** and **Natural Stone by Cosentino®**. The versatility and range of performance of each material, colour, texture and format is evident in the many architectural and digital applications and uses.

Cosentino City Mallorca stands out for its structural and spatial quality, where several architectural resources deserve special attention. One of them is a sculptural, stone-like and lively **Dekton®** free-standing staircase, which aims to project a trail of colour and joy through an exotic garden. Another notable feature of the layout are the skylights on the ground floor, which provide the room with warm, bright natural light, emphasising the naturalness of the spaces and highlighting everyday yet modern scenes, where the latest trends and bold pieces of furniture are used.

Cosentino City Mallorca is a comprehensive platform for inspiration and a meeting point for architecture and design professionals, as well as for end customers. A journey full of sensations begins here...

Atelier

The core of Cosentino City Mallorca is undoubtedly the Atelier, a centre of experimentation and inspiration in which to innovate, create and arrange projects in detail, using a large number of additional materials such as fabrics, wood, metals and glass. Furthermore, the Atelier has a wide range of carefully selected props, including architecture and design books, natural elements, decorative items such as vases or sculptures, and everyday objects such as plates and handles. The ensemble aims to reflect the latest trends in design, architecture and fashion, and how they complement each other perfectly with Cosentino materials.

This space continues with the mix of contrasts that defines the City; in this case, the ultra-compact and carbon neutral Dekton® surface, and its Craftizen Albarium colour used for the entire floor, contrasts with the naturalness and linearity of the oak wood. The dark background and the interplay of light on the shelves create an inspiring drama to the space. The Atelier is completed with two vertical displays where you can see large pieces of the hybrid mineral surface Silestone® and the protected natural stone Sensa by Cosentino®.

Functional kitchen

The functional kitchen of Cosentino City Mallorca brings together different materials, tones and textures. The stunning island in Silestone® Calacatta Gold is framed with its back in Dekton® Bromo and the pivoting wooden slabs on the sides. All this at the foot of an impressive ventilated interior façade in Dekton® Kreta.

The light enters significantly thanks to the huge skylight. The additional lighting highlights the different finishes, textures and tones of the materials, giving the whole a sense of emotion and lightness.

Reception and Composition TV

The space that welcomes you to Cosentino City Mallorca is a declaration of intent. This area reveals the architectural discourse that leads the whole experience of the City. The pure geometries and the obvious, contrasting appearances immerse the visitor in the world of Cosentino City from the very first moment.

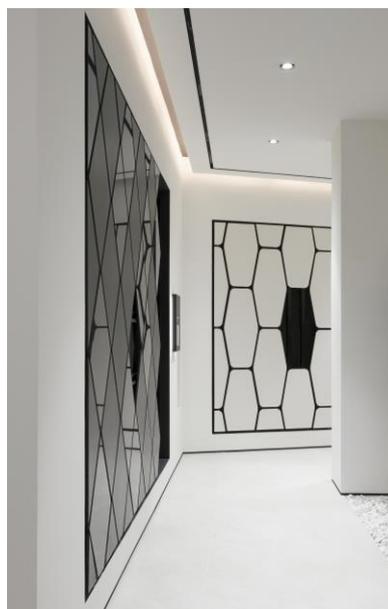

The Dekton® Bromo reception desk is the preamble that serves and enhances the adjacent 'Composition TV', an impressive 1:1 scale ventilated façade, made of Dekton® Rem, which incorporates a television. Multinational and welcoming, this space is ideal for training sessions, talks and meetings.

Next to the 'Composition TV', we find the 'Digital Experience', a large vertical wall where visitors can discover and design different kitchen, bathroom and façade spaces with augmented reality, using all the architectural and aesthetic possibilities offered by Cosentino surfaces. Full customisation comes to life with this digital experience.

Still immersed in this large and versatile space, we come across the 'Digital Slab', an impressive virtual gallery where visitors can view all the colours of the Cosentino portfolio in large format.

Multifunctional basement space + 'Dekton® Façades'

An elegant staircase in Dekton® Bromo – a material that emphasises its lines, highlights its purpose and creates a highly contrasting volume – acts as the main access to the basement. Once there, visitors find themselves in a space where they can enjoy many different experiences, from sitting on a bench made of Dekton® Kreta to hold a meeting or read a magazine, to examining a wide range of products in large format thanks to the 'Rack Texas', or viewing the 'Dekton® Façades' with replicas of real Dekton® ventilated facades. This space is equipped with digital tools where you can find detailed information on each of the projects on display.

Bathrooms

Colours, textures, graphics... Entering the Cosentino City Mallorca bathroom space means immersing oneself in a plea for aesthetic and architectural concepts and forms. Thanks to the interplay of light, a very bright and pure space is created, in which the visitor's attention is instantly focused on the striking Dekton® Taga used for the flooring, the countertop, the washbasins and the large mirror frame that presides over this space.

To achieve this modern, fresh and fashionable look, Cosentino City Mallorca has used products from renowned firms such as Ramón Soler, Gaggenau, Reggiani, Gancedo, Hilti, Alno, Estilo Sant Feliu and Agua de Baleares.
